SUMMARY

Computer Science graduate with hands-on experience in AWS, Docker, Kubernetes, Terraform, Linux, Jenkins, and GitHub Actions. Skilled in DevOps, Cloud Computing, Infrastructure as Code (IaC), CI/CD pipelines, containerization, and automation. Experienced in AWS EC2 deployment, Terraform infrastructure provisioning, and application deployment workflows. Seeking a Cloud Engineer / DevOps Engineer role to build scalable cloud infrastructure and automated deployment solutions.

TECHNICAL SKILLS

Cloud Platform: AWS (EC2, S3, IAM, Lambda, RDS, CloudFormation, VPC).

Containers & Orchestration: Docker, Kubernetes (Pods, Deployments, Services, kubectl).

Infrastructure as Code (IaC): Terraform (Resource Provisioning, State Management).

CI/CD Tools: GitHub Actions, Jenkins.

Version Control: Git, GitHub (Branching, Merging, Pull Requests).

Scripting Languages: Shell Scripting, Python.

Operating Systems: Linux (Ubuntu).

EXPERIENCE

DevOps Engineer Intern | Tutedude

March 2026 – June 2026

- Designed and maintained CI/CD pipelines using GitHub Actions and Jenkins, reducing manual deployment effort by 40% and improving deployment efficiency.
- Deployed and managed containerized applications using Docker, Kubernetes, AWS EC2, and Nginx, ensuring reliable and scalable application deployment.
- Provisioned AWS infrastructure using Terraform by creating and managing EC2, S3, Lambda, and IAM resources.

PROJECTS

End-to-End CI/CD Pipeline Using GitHub Actions, Docker, and AWS EC2 [Link](#)

Technologies: GitHub Actions, Docker, AWS EC2, Git, Linux, Python.

- Designed and deployed a CI/CD pipeline using GitHub Actions and Docker to automate application deployment to AWS EC2, reducing manual deployment effort.
- Automated Docker image build, tagging, and push to Docker Hub on every Git commit, enabling faster and more consistent releases.
- Implemented infrastructure automation using Python on Linux (Ubuntu) to automate deployment tasks, ensuring repeatable and consistent deployments across environments.

AWS Cloud Cost Optimization [Link](#)

Technologies: AWS Lambda, Amazon EBS, Amazon DynamoDB, Amazon CloudWatch, API Gateway.

- Collaborated with a team to build a serverless AWS cost optimization solution for identifying idle EC2 instances and underutilized EBS volumes.
- Developed AWS Lambda functions and used Amazon DynamoDB to store cost optimization recommendations generated from AWS resource analysis.
- Worked with API Gateway to expose Lambda APIs that enabled the application to retrieve and execute cost-saving actions such as stopping EC2 instances and deleting unused EBS resources.

CERTIFICATIONS

AWS Cloud Practitioner Essentials (AWS)

Docker Essentials: A Developer Introduction (IBM)

EDUCATION

B.E. in Computer Science (AI & ML) - Bheemanna Khandre Institute of Technology, Bhalki | CGPA: 7.91/10 | 2026
